31. (Amended) A method of manufacturing a semiconductor device [characterized by] comprising the steps of:

a/
contb
 (a) preparing a tape carrier of a specified thickness with leads disposed around [said] a device hole;

 (b) preparing a semiconductor chip less in thickness than said tape carrier chip and having more than one external terminal;

Al
canceled

(c) disposing said semiconductor chip which is thinner than said tape carrier within the device hole of said tape carrier and then electrically connecting [the] an external terminal of said semiconductor chip to one end of [said] a lead; and

(d) after lamination of a plurality of tape carriers each with said external terminal electrically connected to [the] said lead, sealing respective semiconductor chips disposed within device holes of respective tape carriers using a seal resin at [a] the same time.
